Introduction

The Website named "LUXE & VOUGE" is an online shopping website where users buy their favorite wears according to them as they will be provided the best quality product at affordable prices. There are different categories according to what users want.
As this was just a model website so I only added few dresses(8 each) of different categories i.e., men, women & child.

TECHNOLOGIES USED

Creating an engaging and functional e-commerce website like Gaming Sphere involves utilizing a combination of technologies. In this case, HTML, CSS, and JavaScript serve as the foundational building blocks of the website, each contributing unique features and functionalities that enhance user experience.

HTML (HyperText Markup Language)
HTML is the backbone of any website, providing the structure and semantic meaning to web content. In Gaming Sphere, HTML is used to create the layout of the site, including the homepage, product listings, and checkout pages. Key features include:
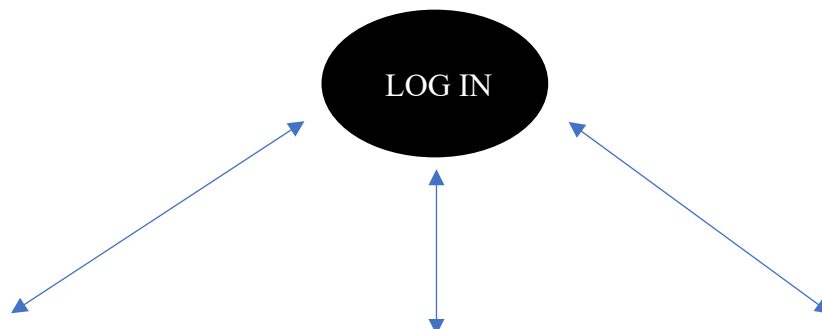

1. **Semantic Elements**: Utilizing elements like <div>, <span>, <pre>, <img src>, <href> helps improve the site's accessibility and adjustable.
2. **Buttons and Inputs**: HTML form are critical for user interactions, such as creating accounts, logging in, and processing purchases. By using various input types (e.g., text, email, number), the site ensures that user data is collected efficiently.
3. **Multimedia Integration**: HTML supports embedding images, videos, and audio files, allowing Gaming Sphere to showcase game trailers, screenshots, and product details effectively.
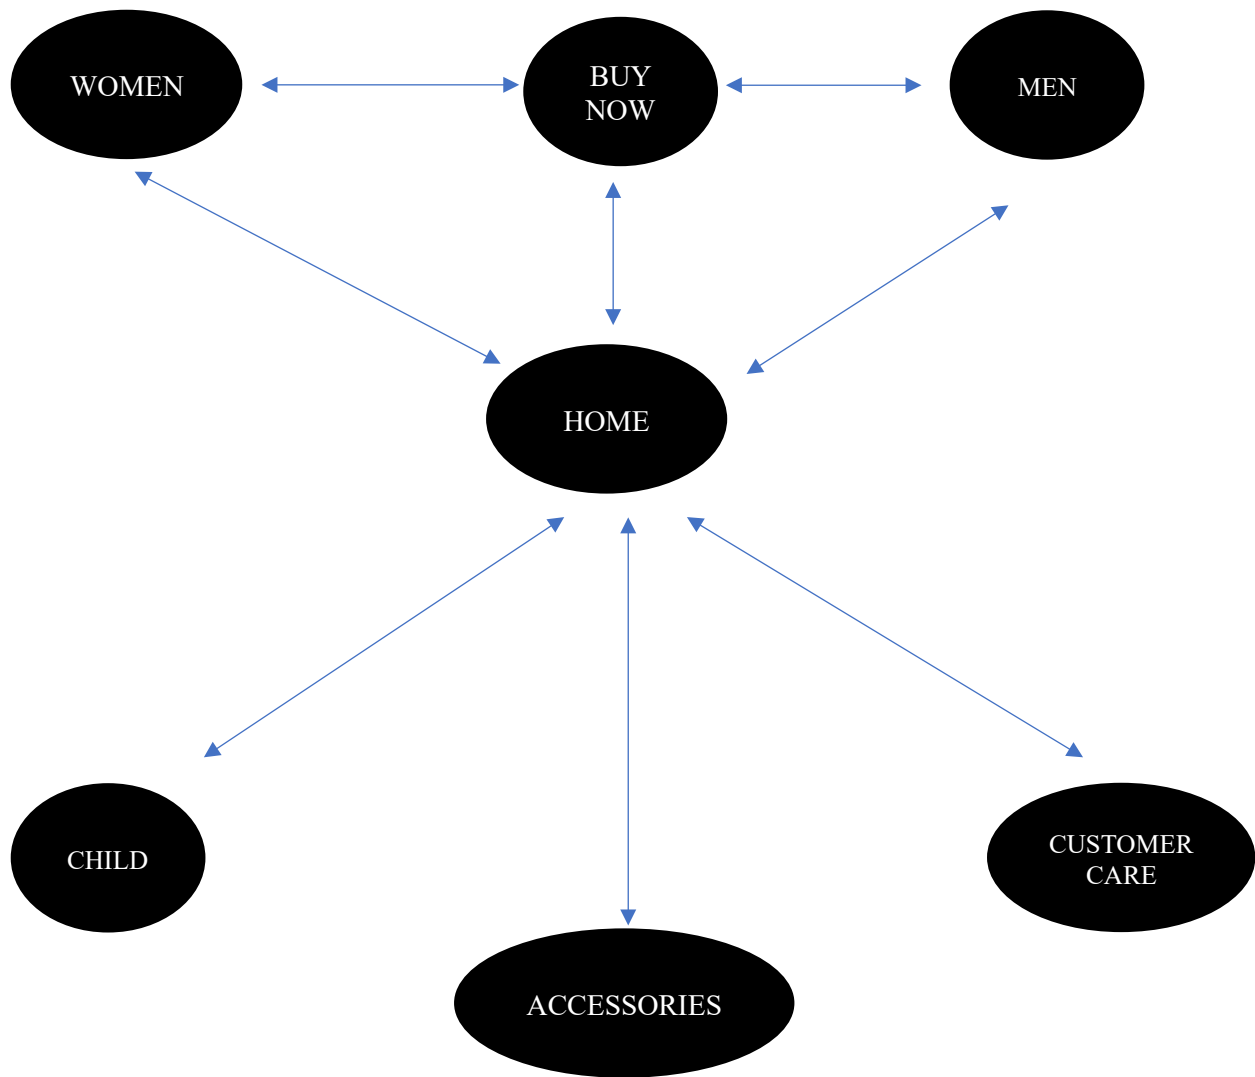

CSS (Cascading Style Sheets)

CSS is responsible for the presentation and layout of the website. It defines how HTML elements are displayed on the screen, enhancing the visual appeal and user experience. Key contributions of CSS in Gaming Sphere include:

1. **Styling and Layout**: CSS is used to create visually appealing designs with custom fonts, colours, and spacing. The responsive design ensures that the website looks great on various devices, from desktops to smartphones.
2. **Flexbox and Grid Systems**: These CSS features allow for flexible and responsive layouts. By using Flexbox for navigation and Grid for product listings, the site adapts seamlessly to different screen sizes, providing an optimal browsing experience.
3. **Animations and Transitions**: CSS enables subtle animations and transitions that enhance interactivity, such as hover effects on buttons and smooth loading animations, making the user experience more engaging.

WORKFLOW

LOG IN

WORKING

1. Home Page

The home page describes the services offered and has links to main sections, such as MEN, WOMEN, CHILD and CUSTOMER CARE.

The user can browse through a different types of categories as per their need and buy their quality products.

All the pages were interconnected with each other as can easily move from one slide to another.
Page 2: MEN wear

In this sections, users will saw some many types of different quality wears of any ages. The section was specially designed for winter wears as per the upcoming weather.

4. WOMENS wear

In this section, users can go for the women clothes of different types as per the need.

5. CHILD wear
The following section contains the product for the children of different stylish types at affordable prices.

The website will include a section for customer support page that responds to common questions on the booking, refunds, and return policies.

The use of CSS media queries allows the website layouts to adjust according to the screen sizes, providing users with smooth navigation and accessibility on all devices.
